

## KalVista Pharmaceuticals Announces Approval of EKTERLY® (sebetralstat) in Japan, First and Only Oral On-demand Treatment for Hereditary Angioedema

Dec 22, 2025

FRAMINGHAM, Mass. & SALISBURY, England--(BUSINESS WIRE)--Dec. 22, 2025-- [KalVista Pharmaceuticals](#), Inc. (Nasdaq: KALV) today announced that the Ministry of Health, Labor and Welfare (MHLW) in Japan has granted marketing and manufacturing approval for EKTERLY® (sebetralstat), a novel plasma kallikrein inhibitor, for the treatment of acute attacks of hereditary angioedema (HAE) in adults and adolescents aged 12 years and older. EKTERLY is the first and only oral on-demand treatment for HAE approved in Japan.

EKTERLY will be commercialized in Japan by KalVista's partner, Kaken Pharmaceutical Co., Ltd. Kaken will launch EKTERLY shortly after it is listed on the Japanese National Health Insurance System (NHI).

"The approval of EKTERLY in Japan marks another major milestone in our global pursuit to bring the first and only oral on-demand treatment to people living with HAE," said Ben Palleiko, CEO of KalVista. "We recognize the significant efforts of our Japanese team in achieving this outcome. We also appreciate the diligent commercial preparations by Kaken and look forward to their continued leadership in making this therapy available to patients in Japan. This approval underscores both the urgent need for new, effective therapies and the potential of EKTERLY to meaningfully improve the lives of individuals and families affected by HAE across the world."

In December 2024, KalVista received Orphan Drug designation for EKTERLY in Japan. The approval is based on results from the phase 3 KONFIDENT clinical trial, which was the largest clinical study ever conducted in HAE. Data from KONFIDENT were published in the *New England Journal of Medicine* in May 2024, showing that EKTERLY achieved significantly faster symptom relief, reduction in attack severity, and attack resolution than placebo, and was well-tolerated with a safety profile similar to placebo. The trial randomized 136 HAE patients from 66 clinical sites across 20 countries.

Since July 3, 2025, EKTERLY has received seven regulatory approvals across major global markets, including in the United States, United Kingdom, European Union, Switzerland, Australia, Singapore, and Japan. Each approval authorizes its use for treating HAE attacks in individuals aged 12 and older.

### About Hereditary Angioedema

Hereditary angioedema (HAE) is a rare genetic disease resulting in deficiency or dysfunction in the C1 esterase inhibitor (C1INH) protein and subsequent uncontrolled activation of the kallikrein-kinin system. People living with HAE experience painful and debilitating attacks of tissue swelling in various locations of the body that can be life-threatening depending on the area affected. Treatment guidelines recommend treating attacks as early as possible to prevent progression of swelling and shorten the time to attack resolution, and to consider treatment for all attacks, regardless of anatomic location or severity.

### About EKTERLY® (sebetralstat)

EKTERLY (sebetralstat) is a novel plasma kallikrein inhibitor approved in the United States, European Union, United Kingdom, Switzerland, Australia, Singapore and Japan for the treatment of acute attacks of hereditary angioedema (HAE) in people 12 years of age and older. EKTERLY is the first and only oral on-demand treatment for HAE, offering efficacious and safe treatment of attacks without the burden of injections. With ongoing studies exploring its use in children aged two to 11 and multiple regulatory applications under review in key global markets, EKTERLY has the potential to become the foundational therapy for HAE management worldwide.
