

# Discovering New Vistas for Patients

We focus on advancing our science to empower patients to better manage their disease and live their lives. Our mission begins with hereditary angioedema (HAE).

## Our Focus on Patients

For more than a decade, KalVista has been committed to developing an investigational oral on-demand treatment that brings scientific advances to the HAE community.

Our deep understanding of the plasma kallikrein pathway and our patient-guided approach allow us to design trials with compassion and scientific rigor with the ultimate goal of empowering patients' lives. Our team draws courage from families living with HAE to help us empower patients to have complete confidence in the management of their condition.

## What We Stand For

At KalVista, we focus on understanding the needs of patients and the limitations of current therapies to design treatments that have a profound impact in advancing the level of care for people living with a serious disease.

We are committed to developing medicines that empower patients to better manage their disease and improve their lives.

We are a team of people with a compassionate commitment to apply our deep scientific expertise to help patients. That's what drives us every day on the journey to bring new medicines that make a real difference.

## History of KalVista Pharmaceuticals

KalVista was founded in 2011 as a small molecule drug development company with less than 20 employees who brought deep expertise in the plasma kallikrein pathway. For more than a decade, KalVista has been focused on bringing scientific advances to address the unmet needs of the HAE community. Today, we have a growing workforce worldwide who shares this mission.
